

## A better way to use Microsoft Lync in the meeting room

Ashton Bentley release their Lync Room Environments to enable personal Microsoft Lync (2010 and 2013) accounts to be used in a meeting room, with all the professional audio-visual facilities expected in today's meetings. No more restrictions with dedicated Appliances.

Move seamlessly between your desk and the meeting room, taking your Lync account with you. Either take your corporate build laptop, or login to your dedicated meeting room PC. Work with a familiar interface with all your personal Lync settings, documents and other applications. This dramatically reduces the preparation time for meetings.

Add new participants during a meeting, introduce new materials, share programs and data from non-Lync devices, work collaboratively using your standard software or browse the web

Ashton Bentley Lync Environments are fully self-contained room audio-visual systems. Supplied complete with everything required. Including;

- Professional Full HD edge-lit LED Display (55" and 70". Single or Dual)
- Audio system with dynamic echo cancellation and bi-amplified active loudspeakers
- Central processor for power management, video & audio processing and control
- Table-top intuitive user interface with laptop connectivity and microphone
- Optional multi-touch surface with full whiteboard functionality

All housed in an elegant freestanding chassis. The complete system is assembled in minutes without tools and building work.

All Ashton Bentley systems can be managed, monitored and controlled remotely by the absee suite of IP Management Tools. Real time dashboard view showing health of all main system components and what is connected, plus full operation metrics providing data such as hours of use and what laptop signals have been connected.

Also available is a range of complimentary tables that place occupants in the perfect position for both videoconferencing and collaborative meeting applications. The user interface with laptop connections (using cable retractors) are concealed in the table surface

End

Ashton Bentley design and manufacture a range of Video Conference, Telepresence (just add Codec) and Presentation environments that simplify all aspects of deployment, operation, support and management. Fully integrated solutions out of a box, assembled in minutes with no tools. Saving you time, saving you money and making things simple. Ashton Bentley™ products are designed and manufactured in the United Kingdom.
