

Ashton Bentley exhibit at Reflex's TD12

Following the huge success of the previous year's Technology Day at Lord's Cricket Ground, Reflex continued a sporting theme this year at the Emirates Stadium, the home to Arsenal Football Club.

Reflex's TD12 opened its doors on 28th November 2012, between 8.30am and 3.00pm, with an exhibition area showcasing exclusive products and the first glimpses of tomorrow's technology, including Ashton Bentley.

Ashton Bentley displayed the Connect 2 a twin 55" Screen Videoconference, Telepresence and Presentation environment. A self contained fully integrated system that comes boxed with all cables, connectors, audio, intuitive control and can be assembled in under an hour, with no tools!

If used for Videoconferencing/Telepresence then just specify your Codec/Camera and the unit will be supplied with the correct wiring harness and brackets, and basic control and remote IP Diagnostics set up ready to use.

Roland Dreesden, Managing Director Reflex, told us "From our perspective this was the best Technology Day we have ever held, breaking last year's registrations..."

"We are delighted to have been included in the group of selected manufacturers to display our products, and educate and inform a superb group of users and technologists. The response was excellent and we are pleased to have Reflex as one of our key suppliers" stated Tony Leedham, Business Development Director, Ashton Bentley.

Ashton Bentley design and manufacture a range of Video Conference, Telepresence and Presentation environments (just add Codec) that simplify all aspects of deployment, operation, support and management. Fully integrated solutions out of a box, assembled in minutes with no tools.

Saving you time, saving you money and making things simple. Ashton Bentley™ products are designed and manufactured in the United Kingdom.
